Project 1 - Validation and AI-Use Record

Changed-input evidence

The Lab 11 Locked Changed-Input Record is the Project 1 changed-input evidence. It was saved before sensitivity analysis on September 29, 2026; no time or commit reference is documented. It records Mac revenue-growth and gross-margin drivers, with the Lab 10 base path of 4.5%, 4.0%, 3.5%, 3.0%, and 2.5% revenue growth and 46.5% gross margin.

For the Mac cases, non-Mac growth and 46.5% gross margin remained at base. For margin cases, Mac and non-Mac growth remained at base. Mac cases produced $116.21-$120.40 per share; margin cases produced $115.29-$120.94. The restored base exactly reproduced $118.12 per share, FY2030 EBIT of $183,240.4M, and FY2030 FCFE of $147,305.4M.

No separate Project 1 pre-run prediction is claimed. No additional changes after the Lab 11 locked record are documented in the repository evidence.

AI-use disclosure

After Edition A, I used Codex and Gemini for research organization, source checking, model development, and documentation. I reviewed material Apple 10-K inputs and executed model outputs. Lab 08 records Codex suggestions of Garmin and Logitech and Gemini suggestions of Dell and Sony. Garmin and Logitech were qualified; Dell and Sony were excluded for the recorded reasons.

The repository does not document exact AI-use dates, prompts, access paths, or a complete tool-by-tool validation log. It documents a Logitech hand calculation and states that material filing inputs and model outputs were independently checked. No additional personal attestation text is recorded beyond these facts.

Execution and reproducibility

The AAPL/GRMN EV/EBITDA script completed with `python3`, printing formula and unit checks, Garmin EV/EBITDA of 24.3132x, and an implied AAPL diluted-share value of $230.37. This is a separate single-peer cross-check, not a median or replacement for the Lab 11 record.

A technical fresh-checkout run passed on October 19, 2026 using Python 3.9.6 and the README's four `python3` commands. It took 0.246 seconds, had no first failure, and displayed passing Lab 10 accounting and Lab 11 restored-base checks. The October 8 README-only run occurred on the project author's computer and is distinct from the later successful temporary-checkout run.

Remaining record limits

- Exact AI-use dates, prompts, and access paths are not documented.
- A complete AI-by-AI validation log and separate personal attestation are not documented.
- The Brightspace receipt, timestamp, and attempt identifier are not available in the repository record.
